

GENERAL.

W. H. VANDERBILT, the owner of Maud S, it is reported, has purchased St. Julien for \$50,000.

THERE have been twenty-six John Smiths in the Massachusetts State prison since its establishment in 1855.

THERE is a party in Milford, Mass., who says he can live comfortably and contentedly on twelve cents a week. His diet consists of crackers and milk principally.

THE London Graphic attributes the scream of a woman partly to vulgarity and partly to vanity. It says that no well-bred woman screams, but only those who morbidly wish to attract attention.

WHILE a woman in Farmersville, N. Y., was assisting her son to hold a sheep he was shearing the animal suddenly kicked, struck the shears and drove them into the unfortunate woman's neck, severing the jugular vein, causing speedy death.

So many spurious St. Bernard dogs are nowadays offered for sale that the superior in charge of the hospice on Mount St. Bernard has decreed that hereafter a register of all dogs born there or on Mount Simphon shall be kept, with a minute description of the animals, and the names of their purchasers.

A PHILADELPHIA cigarmaker decided to become a physician, and went to little further preparation for his chosen profession than to put up a sign beside his door. Among his first patients was a child who had the scarlet fever, but he pronounced the disease cholera infantum, and caused death by wrong treatment. He is under arrest.

A LARGE number of black ants being driven from a sugar bowl, soon returned. To try their ingenuity the housekeeper suspended the bowl by a string from the ceiling. The ants tried to reach it by standing on each other's back, but the pyramid fell down as fast as it was raised. Soon afterward she saw them descending the string and dropping down upon the lumps of sugar.

THE denizens of New York City may now look forward to the prospect of peaceful slumbers, undisturbed by the nightly howls of the feline race. The Board of Aldermen have passed what will be known as the "cat ordinance," which orders the capture and destruction of all the cats at large "in any of the public street, lanes, alleys, highways, parks, or other places within the corporate limits of the city of New York."

THE Chinese army is variously estimated, some placing it as low as 30,000 men, while other accounts raise it to 200,000 men already in the field. Some critics, who profess to speak from personal knowledge, praise highly the efficiency of the Celestial battalions, which, with very few exceptions, have for field officers military experts who learned the trade of war in the armies of England or France, the system of organization and tactics being the same as that existing in the armies of the republic.

In Russia the railways are so many separate thread lines, no network being formed. Thus two lines are instanced which run parallel to each other for nearly 500 miles and have no connection. The result is that to get from one town to another almost in the same latitude a long journey north has to be made, and then a return to the south; the two sides of the triangle between Tzaritsyn, on the Volga, and Kharkoff, via Orel, measuring some 750 miles, while as the crow flies the distance between the two towns is not more than 375 miles.

A HUNGARIAN engineer, having determined to put an end to his life, bought a pistol, got very drunk and locked himself in a private room of a hotel in the town. He pressed the muzzle of the weapon against his left breast and pulled the trigger. The usual explosion followed and the would-be suicide fell to the ground, where he lay patiently for several minutes waiting for death. But he did not die. On the contrary he got better and better until finally in sheer despair he sent for a doctor to ask why he had not died. He soon found out the truth. The bullet with which he had intended to kill himself was in his watch pocket. He had shot with powder and wadding.

BAGGAGE is not a pleasant thing to handle in California. The Contra Costa Gazette says: A few days ago a trunk was put off the cars at Lathrop, and some powder sifted out of the bottom on the platform. A lighted cigar stump was thrown down, which ignited the powder and caused an explosion in the trunk, which was completely destroyed. Recently, when overhauling lost baggage previous to an annual sale, an old valise that had been banged about the room for months was found to contain two immense giant powder cartridges with caps adjusted. Two revolvers loaded and capped fell out of a roll of blankets not long after.

ILLINOIS still leads all the other States in the number of its miles of railroads. This position Illinois has occupied since 1870, at which time it passed Pennsylvania, which previously had been the leading railroad State. The railway mileage of the former State is 7,578; Pennsylvania comes second, with 6,068 miles; New York follows close behind, with 6,008 miles; Ohio is fourth, having 5,521 miles; Iowa fifth, with 4,779 miles; and Indiana sixth, with 4,356 miles; Missouri, Michigan, Kansas, Minnesota, Wisconsin, Texas, Georgia and California follow in the order named. There is no State or Territory which is totally devoid of railroads, though Montana Territory can boast of but ten miles of completed road.

AN English naturalist, while preserving ants and spiders in bottles of alcohol, met with a touching exhibition that caused him to forego further experiments. He wished to preserve a large female spider and twenty-four of her young ones that he had captured. He put the mother into a bottle of alcohol, and saw that after a few moments she folded her legs upon her body and was at rest. He then put into the bottle the young ones, who, of course, manifested acute pain. What was his surprise to see the mother arouse herself from her lethargy, dart around, and gather her young ones to her bosom, fold her legs over them, again relapse into insensibility, until at last death came to her relief, and the limbs no longer controlled by this maternal instinct, released their grasp.

SCIENCE AND INDUSTRY.

QUICKSILVER may be readily frozen by placing a small quantity of it along with anhydrous ether in the decaer used for freezing water of a Carre's freezing machine, and exhausting in the usual manner.

THE "fifteen" puzzle has been brought to the attention of so learned a body as the Royal Society, Edinburgh. At a recent meeting, Prof. Tait sent in a note on the theory of the puzzle, and gave a rule for determining whether a particular arrangement was solvable or not.

THE probable fact that certain liquids may be dissolved in gases is one of the late remarkable discoveries in chemical science. On compressing a mixture of five volumes of carbon dioxide and one volume of air, Cailliet found that the former at first liquefies, but that as the pressure is increased to 150 or 200 atmospheres, the liquid is gradually lessened until it finally disappears altogether, being dissolved by the gas.

WITH a new "radiograph" for recording the intensity of the sun's radiation, Mr. D. Winstanley has observed a curious "thermal twilight." The instrument shows a rise in the temperature before sunrise, owing to solar radiation. A more remarkable circumstance, however, is that a fall of temperature being indicated a little after sunset, the index mysteriously rises just before midnight and sinks again, although the sun is then directly over the opposite hemisphere.

AN important branch of trade has sprung up in the discovery that pita, a sort of cotton or flax vegetable, can be woven into excellent cloth. Bales sent to England have been experimented upon, and beautiful handkerchiefs, and cloth, soft as silk, made from pita, returned to Mexico. The color is beautiful and the material durable. There are vast fields of pita in its natural condition, in the States of Vera Cruz, Tamaulipas and Tabasco. The Mexican Revista considers this discovery more important than the discovery of a gold mine.

DR. WERNER SIEMENS and the German Postmaster-General have founded an Electro-Technical Society in Berlin. The former stated at a recent meeting that his new electro-dynamic machine had been so improved by Herr Von Hefner that its action is actually cheaper than the locomotive for short distances. He proposes, therefore, to construct light overhead rails, along which carriages would be propelled by the new engine. The dynamic engine is also applicable to locomotives in order to increase their tractive power.

A SERIES of papers have been commenced in La Nature by M. Tissandier. It is meant to show how physical truths may be demonstrated by very simple means. The first paper treats on pneumatics. Among the experiments, many of which are old, is one in which some paper is burnt in a carafe full of air. After it has burnt a few seconds, a hard-boiled egg with the shell off, is placed at its mouth. The egg is pressed inward by the atmosphere (the combustion having caused a partial vacuum), it gets more and more elongated, and at length wholly enters the bottle, with a slight detonation.

The Most Perfect Example of Christian Architecture.

ON September 4, 1842, nearly six hundred years after the first foundation stone of the Cologne Cathedral had been laid, the King himself (Frederick William IV.) laid the second, in the presence of a brilliant assemblage of civil and ecclesiastical potentates, and a vast concourse of spectators, amid all the grandest musical and ceremonial splendors of Roman Catholic worship. From that day forward the work proceeded steadily, and was taken up as a matter of national and indeed of European interest. The Queen of England was among the royal contributors, and herself assisted to place a bracket in the center arch of the north front. The present Emperor has not, we believe, shown less zeal in the matter than his predecessor, and it is certainly unfortunate that the existing religious complications of Germany should prevent his taking as prominent a part in the consecration of the completed fabric as the late King took in the laying of the new foundation stone some forty years ago.

On the architectural and ornamental details of the building we have no space to enter here. To our own taste, we must confess, the immense height has always seemed to require a greater length for the due proportion and effect of a Gothic church. Nor does it impress us, as a whole, with the same awful solemnity as some of the older cathedrals, both in the North and South of Europe. But it would be ungracious at this moment to indulge in criticism in recording the completion of what has been called the most perfect example of the most perfect period of Christian architecture, and which is unique alike in its structure and its history. According to a Protestant Prussian official, quoted by Dr. Deuillinger in his "Lectures on the Reunion of the Churches," it is destined to be no less unique in its prophetic import. "I am certain," he wrote, "that the time will come, before the newly inserted stones are molded, when a common Te Deum will be sung in the Cathedral of Cologne."

Certainly there has been something remarkable, and most unexampled, in the friendly co-operation during so many years of German Catholics and Protestants, headed by their Protestant sovereign in carrying this great national work to its completion. But there are no signs yet visible of the Kulturkampf ending in a feast of reconciliation within the walls of the newly consecrated nave. Meanwhile Cologne, which has been called "the Rome of the North," may be congratulated on possessing a cathedral, differing widely indeed in style, as befits a northern clime, but not unworthy, for beauty of detail and magnificence of proportion, to take rank even with St. Peter's.—London Saturday Review.

THE amount of soda water with which it is that is consumed these days is simply incredible.—Lockport Union.

HOME AND FARM.

COOL rain water and soda will take machine oil out of washable goods.

ROSE WATER.—Procure a glass bottle with wide mouth and ground glass stopper, fill two-thirds full with deodorized alcohol, and add rose leaves until no more can be forced into the bottle. Let stand several months, keeping air tight, strain when the virtue has left the leaves. White roses are best.

THE best way to fry fish is to first fry some slices of salt pork, then roll the pieces of fish in fine Indian meal and fry in the pork gravy. About three slices of pork for a medium sized fish. Whitefish needs less fat than almost any other.

THE meaning of the word "soiling," as understood among cattle feeders, is the practice of confining animals to the stake or small lots, and feeding them on green clover, corn, grass, etc., cut as needed, and not allowing the stock to graze on the ground where the food grows.

BAKED EGG PLANT.—Boil a large egg plant in plenty of water until it is perfectly tender, trying it with a straw; let it stand in the colander to drain until cold; then peel, cut open, and take out the seed; mash carefully with a gill of milk, two eggs, a desertspoonful of salt, a saltspoonful of white pepper, half a grated nutmeg, a heaping tablespoonful of butter, and two tablespoonfuls of very fine bread-crumbs. Bake half an hour in a quick oven; a slow oven spoils it.

COCONUT CUSTARD.—To one pound of grated coconut allow one pint of milk and six ounces of sugar; beat well the yolks of six eggs, and stir them alternately in the milk with the coconut and sugar. Put into a pail or pitcher; set it into boiling water and stir all the time till very smooth and thick; as soon as it comes to a hard boil take it off and serve in cups and tumblers.

FOURTEEN years ago J. M. Sterling, of Monroe, Mich., placed two gateposts of white oak in front of his residence. When they were set, he bored into the top of each, with an inch and a half auger, a hole three inches deep, filled it with cotton salt, tightly plugged it, and capped the posts. A recent examination of the posts proved that they were as sound from top to bottom as when they were placed in position.

LITTLE PLUM CAKES TO KEEP LONG.—Dry one pound of flour, and mix with six ounces of finely powdered sugar; beat six ounces of butter to a cream, and add to it three eggs well beaten, half a pound of currants, washed and nicely dried, and the flour and sugar; beat all for some time, then dredge flour on tin plates, and drop the batter on them the size of a walnut. If properly mixed, it will be a stiff paste. Bake in a brisk oven.

SUMMER APPLES.—T. T. Lyon, President of the Michigan Pomological Society, gives the following list of the best summer apples: Early Harvest, the earliest, followed closely by Carolina Red June, next Early Strawberry and Summer Rose which ripen nearly together, then Primrose. Early Joe ripens late in August and early in September, and Garden Royal follows it closely. Carolina Red June is a handsome summer apple when fair, but we have found it so affected with black mildew as to be nearly worthless. The sweet Bough is the best early sweet variety, ripening after the earliest above named.

Green Crops as Manure.

ON a recent visit to Mr. E. P. Roe's small-fruit farm at Cornwall-on-Hudson, we observed that wherever a crop or plantation had been removed, buckwheat was growing. This, Mr. Roe explained, would be spaded under at the proper time. It was, he thought, a cheap and profitable means of fertilizing the soil and rendering it looser and friable. Clover would be better still, but required more time than could be spared on a place like his. He also forks under all the weeds on his farm, instead of hoeing them down, thus restoring to the soil what they have taken from it, and adding to it whatever elements they may have drawn from the atmosphere. Some interesting facts bearing upon the value of such a mode of increasing the productive power of land are given by a correspondent of the Practical Farmer, who says:

I seeded land last year which I designated for potatoes. This year I sowed rye after cultivating my corn for the last time; but the seed not holding out, there was a three-cornered strip of short rows which were not sowed. This spring, about the 20th of May, as the rye commenced to head and was standing knee-high to the horse, I plowed it under, using a chain to draw it nicely under the furrow; but I noticed that the part with no rye on it was becoming foul with weeds, and through the summer the outlines of this vacant place showed very distinctly in the potato-tops not being as green, and smaller than on the rest of the field, and the yield was not as good there, though the balance of the field yielded so well that it was evident that the green manuring had been very good for them.

After harvesting two fields of winter grain, I found that the clover seed on them had failed; so I cultivated these fields and sowed them to rye about the middle of August, and it was a pleasure all the fall for me to see the clean and green appearance of these fields as they compared with the foul condition of most of the stubble fields in this section (for nearly all the clover on them failed to grow on account of an early summer's drought). These fields gave about two months' pasturing for a hundred sheep, leaving them (the sheep as well as the field) apparently all the better for it. We all think clover to be the best of all to plow under for green manuring, but many times, either from the failure of clover or the want of time enough to grow it, the farmer must cheaply prove his land materially and cheaply by sowing it to buckwheat, or oats, or rye, for plowing under instead. The opportunities for putting in such crops will be found by the farmer after he has once seen the advantage of them, and how cheaply and quickly they can be grown. This green manuring, as far as it can be practised, is done much cheaper than by any other plan. Besides, it keeps the land sheltered and clean from the harvest of one crop to the time of putting it into another.—Examiner and Chronicle.

[Cleveland (Ohio) Plain Dealer.]
Capt. Henry M. Holzworth, Chief Detective Force, Cleveland, O., says: St. Jacobs Oil gives surprising relief, does a world of good and conquers pain. It completely cured me of Rheumatism.

[Pottsville (Pa.) Evening Chronicle.]
For sixteen years, writes Mr. Joseph Alber, of this place, I had suffered with Dyspepsia, and spent many a dollar in find relief, but in vain. I was advised by Mr. F. Altstadt to take Hamburg Drops. I had taken scarcely one of the little bottles before I felt better and soon got well altogether. I am now a warm advocate of Hamburg Drops.

—One of the hotels at Meredith, N. H., does not keep its boarders very long, and the landlord wonders why. He probably thinks that Bostonians are too intellectual to mind hearing a servant call out, "Second help of steak for Miss Brown." Second help of bread for Mrs. Robinson!—Boston Transcript.

National Treatment and Positive Cures are what the afflicted seek for, and these are what Dr. Pierce's Family Medicines are not do to disappointment. So positively efficacious is his Favorite Prescription in all cases of female weakness, nervous and derangement, incident to the female system, that this potent remedy is sold under a positive guarantee. For particulars see Pierce's Memorial Book (given away by druggists), or see the wrappers of the medicine. Sold by druggists.

WASICA, Minn., April 5, 1879.
Dear Sir: I feel that I should be neglecting my duty were I to fail in giving my testimony as to the value of your medicines. For years I have been a great sufferer from chronic diseases which our physicians treated in vain. I am now using your Favorite Prescription and find myself almost well. Your medicines have done me more good than I have ever used.

I remain gratefully yours,
Mrs. E. B. PARMELEE.

Vassar College.
The continued existence and steady growth of any institution of learning proves two things: First, executive ability of the highest order, which makes itself felt not only in the upper stratum of collegiate affairs, but throughout the structure down to the feeblest by-law; and second, that spirit of liberality and far-sightedness which tends to keep abreast of to-day.

The munificence of the founder of Vassar College would have been vain without these conditions, and that she is what she is, proves the wisdom of those shoulders upon which fell the responsibilities of this of this generous philanthropy. The college situated at Poughkeepsie, N. Y., bears the same relation to the higher education of young women, as do Yale and Harvard to that of men. A glance through the catalogue discovers a course of study made possible for young ladies by the founding of this institution. Standing amid her two hundred acres, with miles of walks, her lake and other facilities for out-of-door exercise, her newly-erected laboratories and cabinets, her library and reading-room, museum of natural history, astronomical observatory and her gallery of art, she is a monument alike to the wisdom of her founder and the equally splendid achievement on the part of the Vassar of to-day.

Wonderful to Contemplate.
From the columns of the Republican, Springfield, Mass., is taken the following: "It is a settled fact that Warner's Safe and Vault is the best of its kind, and is the property of the proprietors, H. H. Warner & Co. The way they go into the habitations of those afflicted with diseases for which recommended is truly wonderful to contemplate."

Clifford's Febrifuge. Fever and Ague, and all bilious disorders are speedily eradicated from the system.

Best in the world. Made only by the Frazier Lubricator Co., at Chicago, New York and St. Louis. Sold everywhere.

Clifford's Febrifuge. Nature's remedy for Fever and Ague. Never known to fail in a single case.

Willott's Fever and Ague Tonic, the old reliable remedy, now sells at one dollar.

REDDING'S RUSSIA SALVE is the universal remedy for burns, scalds, cuts, bruises, etc.

Clifford's Febrifuge. In the cure of Fever and Ague displays extraordinary powers.

"The medicine that has cured me, is the famous HUNT'S REMEDY."

A NEW TREATMENT for Consumption, Asthma, Croup, Hoarseness, Bronchitis, Catarrh, Laryngitis, Whooping Cough, and all diseases of the Throat and Lungs.

DR. STARKEY & PALLEN, 1109 and 1111 Girard St., Philadelphia, Pa.

Golden Medical Discovery

Dr. Pierce's Golden Medical Discovery cures all Humors, from the worst Scrofula to a common Itch, Pimple, or Eruption. Erysipelas, Salt-Rheum, Fever Sores, Boils, Carbuncles, and all diseases caused by bad blood, as conquered by the powerful, purifying, and invigorating medicine.

Especially has it manifested its potency in curing Tetter, Eczema, Boils, Carbuncles, and all diseases caused by bad blood, as conquered by the powerful, purifying, and invigorating medicine.

It cures all diseases of the skin, and all diseases of the blood, and all diseases of the system, and all diseases of the organs, and all diseases of the nerves, and all diseases of the muscles, and all diseases of the bones, and all diseases of the joints, and all diseases of the senses, and all diseases of the mind, and all diseases of the soul.

It cures all diseases of the skin, and all diseases of the blood, and all diseases of the system, and all diseases of the organs, and all diseases of the nerves, and all diseases of the muscles, and all diseases of the bones, and all diseases of the joints, and all diseases of the senses, and all diseases of the mind, and all diseases of the soul.

It cures all diseases of the skin, and all diseases of the blood, and all diseases of the system, and all diseases of the organs, and all diseases of the nerves, and all diseases of the muscles, and all diseases of the bones, and all diseases of the joints, and all diseases of the senses, and all diseases of the mind, and all diseases of the soul.

It cures all diseases of the skin, and all diseases of the blood, and all diseases of the system, and all diseases of the organs, and all diseases of the nerves, and all diseases of the muscles, and all diseases of the bones, and all diseases of the joints, and all diseases of the senses, and all diseases of the mind, and all diseases of the soul.

It cures all diseases of the skin, and all diseases of the blood, and all diseases of the system, and all diseases of the organs, and all diseases of the nerves, and all diseases of the muscles, and all diseases of the bones, and all diseases of the joints, and all diseases of the senses, and all diseases of the mind, and all diseases of the soul.

It cures all diseases of the skin, and all diseases of the blood, and all diseases of the system, and all diseases of the organs, and all diseases of the nerves, and all diseases of the muscles, and all diseases of the bones, and all diseases of the joints, and all diseases of the senses, and all diseases of the mind, and all diseases of the soul.

It cures all diseases of the skin, and all diseases of the blood, and all diseases of the system, and all diseases of the organs, and all diseases of the nerves, and all diseases of the muscles, and all diseases of the bones, and all diseases of the joints, and all diseases of the senses, and all diseases of the mind, and all diseases of the soul.

It cures all diseases of the skin, and all diseases of the blood, and all diseases of the system, and all diseases of the organs, and all diseases of the nerves, and all diseases of the muscles, and all diseases of the bones, and all diseases of the joints, and all diseases of the senses, and all diseases of the mind, and all diseases of the soul.

It cures all diseases of the skin, and all diseases of the blood, and all diseases of the system, and all diseases of the organs, and all diseases of the nerves, and all diseases of the muscles, and all diseases of the bones, and all diseases of the joints, and all diseases of the senses, and all diseases of the mind, and all diseases of the soul.

It cures all diseases of the skin, and all diseases of the blood, and all diseases of the system, and all diseases of the organs, and all diseases of the nerves, and all diseases of the muscles, and all diseases of the bones, and all diseases of the joints, and all diseases of the senses, and all diseases of the mind, and all diseases of the soul.

It cures all diseases of the skin, and all diseases of the blood, and all diseases of the system, and all diseases of the organs, and all diseases of the nerves, and all diseases of the muscles, and all diseases of the bones
